Dear Neighbor,

Our top priority at the Robinson Plant is to ensure that our operations never threaten the safety or environment of our neighbors. Part of this responsibility is always having adequate plans to deal with any emergency that might occur, no matter how unlikely.

This safety information brochure describes these plans. Please review this information to familiarize yourself with them, and keep this brochure handy so you can find it if it is ever needed.

If you or members of your family would need special assistance in an emergency, please fill out the Request for Special Assistance card inserted in this brochure, or have someone fill out the card for you, and return it as soon as possible. No postage is required.

If you have any questions about emergency plans, please call your county emergency management agency (numbers are listed in the brochure) or Robinson's Emergency Preparedness unit at 1.843.857.1430.

The Robinson Plant has achieved a level of performance that places it among the top plants in our industry, and we are committed to continuous improvement. Thank you for your continued support. Best wishes for a great new year.

Sincerely,

Eric McCartney
Vice President, Robinson Nuclear Plant

Progress Energy

progress-energy.com

Your Safety Is Important to Us

This brochure gives basic information on radiation and instructions on what to do if there is an emergency at the Robinson Plant near Hartsville. State and county officials and Progress Energy want you to be prepared so that you and your family would know what to do in an emergency.

The Robinson Plant has multiple backup safety systems, so a serious emergency is unlikely to occur. Plant operations are conducted under strict safety rules and are monitored by the Nuclear Regulatory Commission (NRC), a federal agency that regulates the nuclear industry in the United States. As part of regulatory requirements, full-scale emergency exercises are conducted every other year with plant personnel and state and county officials participating. This brochure is part of the comprehensive emergency plans developed by the state of South Carolina, Chesterfield, Darlington, Lee and Florence counties and Progress Energy.

Be sure you understand the information in this brochure so you and your family will be prepared in the unlikely event of an emergency. Discuss this material with family members and friends.

If you know someone who cannot read or is visually impaired, please read this brochure to them and make sure they understand this information.

The Warning System

In the unlikely event of an emergency at the plant, 59 pole-mounted sirens located in the 10-mile emergency planning zone (EPZ) around the plant would be activated to alert the public. **Hearing the sirens does not mean you should evacuate.**

If you hear the sirens and are not sure if it is a test of the system or an emergency, tune to a local radio or television emergency alert system (EAS) station listed in this brochure. If there is an emergency, these stations should stop regular programming to give information and instructions to the public. **The sirens will sound several times for three-minute intervals if there is any emergency that could affect the public.** Keep the television or radio tuned for more information. You might be advised to shelter in place or to evacuate from the area.

The sirens are activated by state and county officials and are tested often to make sure they work properly. The sounding of the sirens is probably just a test, but there could be an emergency at the plant.

Sirens are the primary warning system used to alert the public in the event of an emergency. Officials might also travel along selected county and state roads in the 10-mile EPZ in emergency vehicles equipped with loudspeakers and sirens. They might also

Classification of Emergencies

There are four different classifications of emergencies that could occur at a nuclear power plant. The classifications help state and county officials and plant personnel determine how they will respond to each kind of problem.

Unusual Event

This is the least serious of the four emergency classifications. It means there is an event at the plant, but the event would not affect the public.

Alert

This is an event that could reduce the level of safety at the plant. There is still no danger to the public. State and county officials and Progress Energy might decide to activate their emergency centers, just in case the situation gets worse.

Site Area Emergency

This event could lower the safety of the plant, but probably not enough to pose a danger to the public. The sirens will be sounded to alert the public to listen to local radio and television stations for information and instructions.

General Emergency

This is the most serious event that could occur at the plant. State and county officials would take action to protect the public. Sirens would be sounded and local radio and television stations will give instructions to the public living in the affected areas. They would be told to stay indoors or to evacuate from the area.

Siren Tests

There are three ways the sirens are tested:

Silent Test

A silent signal is sent to each siren every week. The sirens will rotate, but do not sound during this test.

Low-Volume "Growl" Test

A very low sound like a growl will occur for a few seconds. Low-volume tests are conducted every three months. Only people very close to a siren will hear this test. Progress Energy will provide information about the test through the local news media.

Full-Volume Test

All the sirens will sound at the same time for three-minute intervals. A full-volume test is conducted once a year. Progress Energy will provide information about the test through the local news media and will mail postcards to residents living within the 10-mile EPZ.

go door-to-door in selected areas. Some residents in the 10-mile EPZ have been identified as needing special assistance in the event of an emergency. These people should fill out the [Request for Special Assistance](#) card, which is attached inside this brochure.

Taking Shelter in Place

If there is an emergency at the plant, radio or television EAS stations might instruct you to shelter in place as a precaution. **State and county officials may decide sheltering in place is the best thing to do if air containing radioactive materials were to pass over your area. By remaining indoors, you reduce exposure to the radioactive materials.**

You should follow these steps when told to shelter in place:

1. **DO NOT go to your child's school.** Children will be sheltered and protected by school officials.
2. Shelter livestock and give them STORED feed and water. Keep pets indoors.
3. **Go indoors and close all windows and doors. Turn off fans, heating and air conditioning that require outside air. Close any other air intakes.**
4. Do not use the telephone unless absolutely necessary.
5. Cover all open food containers. The food, water and milk supplies in your home are safe to eat and drink.
6. Go to a room or basement with few or no windows.
7. Stay tuned to a local radio or television EAS station for more emergency information.
8. **Stay indoors until a local radio or television EAS station reports it is safe to go outside.**
9. If you must go outside, place a cloth over your nose and mouth.

Evacuation Procedures

If there is an emergency at the plant, people in some zones might be asked to evacuate as a precautionary measure. Stay calm. You will only be asked to evacuate if it is necessary. Evacuation routes and relocation centers for each zone are listed on pages 11-13.

What You Should Do

1. Pack necessary items such as the following to take with you:
 - this safety information brochure
 - two sets of clothing, two blankets or a sleeping bag for each person planning to stay at the relocation center
 - toilet articles, bath towels
 - necessary medication
 - baby needs
 - identification, car registration
 - credit cards, checkbook, cash
 - portable radio, flashlight, batteries
2. Do not take pets with you if you plan to stay at the relocation center. All pets and livestock should be sheltered. Leave them a two-day supply of stored food and water.
3. Plan ahead! It is a good idea to drive your evacuation route now so that you are familiar with it. Call your local county emergency management office if you have questions. The telephone numbers for county emergency management agencies are listed on page 8.

As You Evacuate

1. If your child attends a school in the 10-mile EPZ, **do not go to the school**. Children in these schools will be taken by bus to relocation centers (listed on pages 9-10).

Students who live inside the 10-mile EPZ, but go to school outside the 10-mile EPZ will not be allowed to return to their homes until such time as:

 - the students are released to the custody of their parents or until the school district makes the decision to close the remaining schools and evacuate the students.
2. Close car windows and vents. Do not turn on the car air conditioner or heater.
3. **As you drive, stay tuned to a local radio station for more information.**
4. Follow the evacuation route to the designated relocation center. You may stay at the relocation center or another location at least 10 miles away from the plant. **It is very important that you sign in at the relocation center even if you do not plan to stay there.**

Radio/Television Stations

These stations will participate in emergency alert system (EAS) announcements in the event of an emergency.

If you hear several three-minute-long siren blasts, tune to one of the following stations for information:

Radio Stations

AM

1230	WOIC
1310	WDKD
1380	WAGS
1420	WCRC
1450	WHSC
1490	WTNI

92.9	WEGX
93.7	WSIM
94.7	WICI
95.3	WHEZ
97.5	WCOS-FM (SR-1) <i>State Relay</i>
98.5	WHSC
99.3	WWKT
100.5	WHLZ
101.3	WWDM
102.1	WMXT
103.3	WJMX (LP-1) <i>Local Primary Monitor</i>
105.5	WDAR
106.3	WYNN (LP-2) <i>Local Primary Monitor</i>

Television Stations

WIS-TV
WBTW-TV
WPDE-TV
WLTX-TV
WOLO-TV
WRJA-TV
WJPM-TV
WFXB-TV
WACH-TV
WMBF-TV

The channels above may be different if you have cable television service. Consult your local listings if you have a question about the channel numbers for these stations.

Other radio and television stations may also broadcast information and instructions in an emergency.

Three Types of Radiation

Alpha

The least penetrating; it can be stopped by a piece of paper.

Beta

It can be stopped by a thin piece of aluminum.

Gamma

It can be stopped by lead, water or concrete.

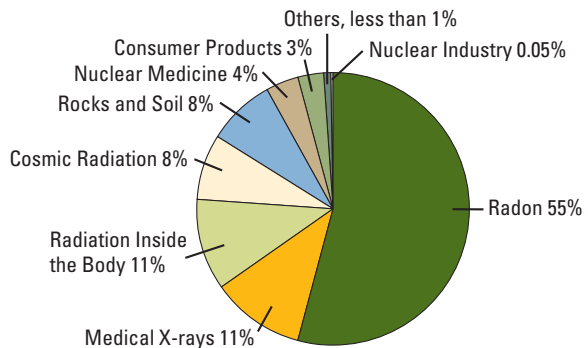

Radiation

We are constantly exposed to radiation from our natural environment. This is called background radiation. Sources of background radiation include the sun, the air we breathe, soil, plants, building materials and even the human body. We are also exposed to man-made sources of radiation like medical and dental X-rays, smoke detectors and television sets.

You could be exposed to radioactive materials in three ways:

- Radioactive material in the air and on the ground. You can prevent exposure by going to a place with no radioactive material.
- Radioactive material on hair, skin and clothing. Exposure will stop if you wash off the radioactive material.
- Breathing or swallowing radioactive material. Exposure will stop when the material stops giving off radiation or when your body eliminates it.

Sources of Radiation Exposure

Measured in millirem (mR) per year

Sources and amounts of natural background radiation

Radon	200 mR
Cosmic radiation	27 mR
Internal radiation from human body	40 mR
Rocks and soil	28 mR

Sources and amounts of man-made radiation

Medical X-rays	39 mR
Nuclear medicine	14 mR
Consumer products (TVs, smoke detectors, etc.)	10 mR
Other (including nuclear power)	2 mR

Total **360 mR**

Potassium Iodide

In cases where the public may be exposed to certain types of radioactivity, state and local health officials may advise the public to take potassium iodide (KI) tablets.

KI is an over-the-counter drug that may reduce the amount of radioactive iodine absorbed by the body's thyroid gland. KI saturates a person's thyroid with iodine so that it cannot absorb any radioactive iodine.

The public should only take KI when directed to do so by public health officials. Evacuating the area or staying inside, based on directions given by state and county officials, is the best protective action to take in the unlikely event of a radioactive release from the Robinson Plant.

For more information on KI, contact your county health department at the numbers listed below, or the South Carolina Department of Health and Environmental Control (SCDHEC) Nuclear Response & Emergency Environmental Surveillance Section at 1.800.476.9677.

Chesterfield County Health Department	1.843.623.2117
Florence County Health Department	1.843.661.4835
Hartsville Health Department	1.843.332.7303
Lee County Health Department	1.803.484.6912
DHEC Region 4 Public Health Office	1.843.661.4830

For more information on KI, you can visit the SCDHEC Web page at scdhec.gov.

Agricultural Information

If there is a nuclear emergency at the plant, farmers should be prepared to take the following immediate actions:

- Monitor and follow instructions given over the emergency alert system (EAS). Specific recommendations for the protection of farm animals and agricultural products will be issued by appropriate state and county officials.
- Remove all dairy animals from pasture, shelter if possible and provide them with stored feed and protected water. Protected self-feeders and automatic livestock waterers are the most effective equipment to use.
- Store feed in buildings or cover if outdoors. Feed stored in buildings will be protected from contamination. Keep radioactive particles out of other feed by covering the feed with plastic or canvas.
- Cover open wells and water tanks.

Special Assistance

Special plans have been made for people identified as needing special assistance. The Request for Special Assistance card helps county officials know if you need assistance. Even if you have previously submitted a request card, the information must be updated every year, so please fill out this card and mail it as soon as possible. This information will be handled by county emergency management officials in a confidential manner.

You should fill out the special assistance card if:

- *You are hearing impaired and use TDD equipment or hearing impaired and require assistance to help with daily activities.*
- *You have someone in your home who is on total bed care and requires a care-taker for assistance.*
- *You have someone in your home who is on a ventilator (breathing machine).*
- *You are visually impaired and cannot operate a motor vehicle (drive a car).*
- *You require transportation assistance (need a ride) and cannot ride with someone else.*
- *You have a problem that would cause you to require assistance in an evacuation.*

If you are responsible for someone in a nursing home, rest home or hospital, do not pick them up. Officials will care for these people and take those needing medical care to hospitals and special care facilities outside the 10-mile area surrounding the plant.

If you have neighbors with special needs, you may want to help them shelter in place in their home or to evacuate.

Map of the 10-Mile Area Around the Robinson Plant

The map is divided into zones. Each zone is marked with a different letter. If the radio or television station tells you to evacuate, the information on the following pages tells you where to go to be safe. Look at the evacuation route for your zone. Mark the route on the map now so you will have it if you need it.

Your Quick Reference Safety Information for the Robinson Plant

Please take a minute and complete the information below so you will have it in an emergency.

My local radio station is:

My local television station with information is:

My zone on the map is:

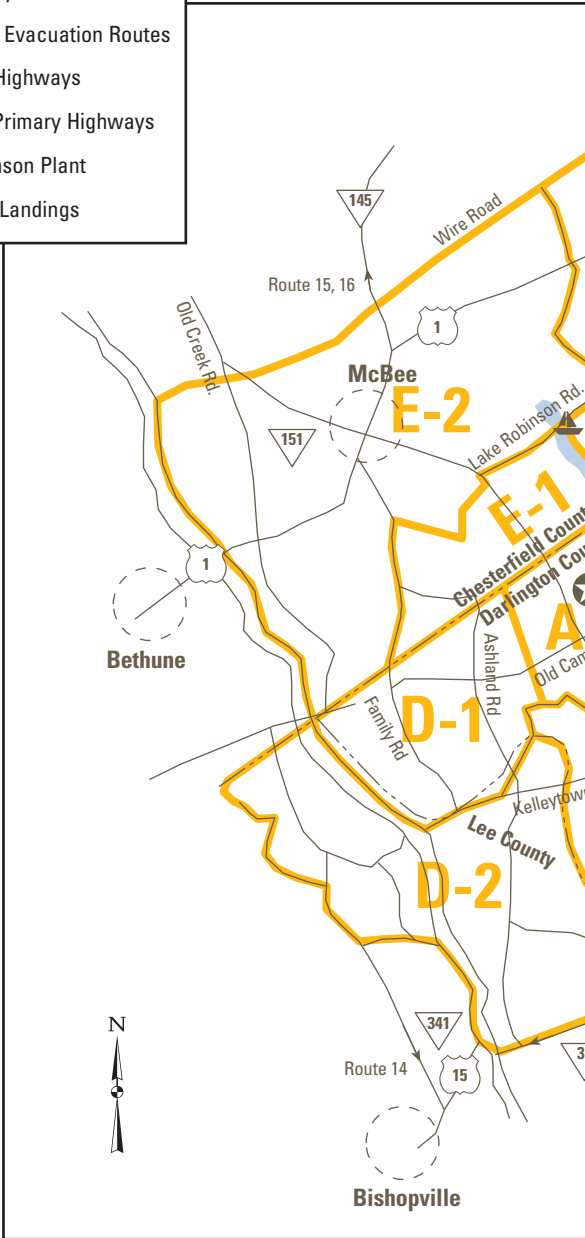

The relocation center for the zone where I live is:

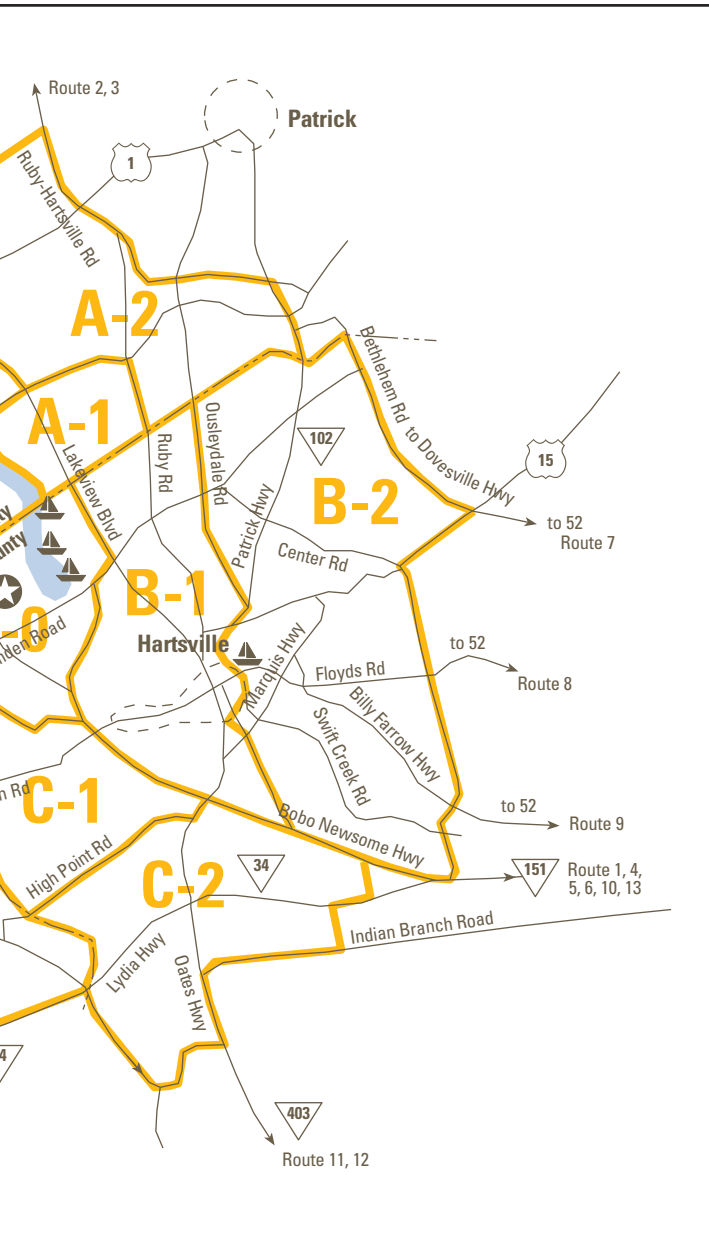

The evacuation route for the zone where I live is:

The relocation center(s) for my child (children) is (are):

Plan ahead! Drive your route now. If you have any questions, call your emergency management office.

Relocation Centers for Licensed Child Care Centers and Schools

If there is an evacuation while children are in school, DO NOT GO TO THEIR SCHOOL. Schoolchildren within the 10-mile emergency planning zone (EPZ) will be taken by school officials to one of the relocation centers listed in this chart.

Look at the chart in the column under "School/Day Care" and find your child's school. The next column over shows the zone on the map in which the school is located. The last column lists the relocation center for each school in the 10-mile area around the plant. When you have determined the designated relocation center for your child's school, you may do one of the following:

- 1. You may go to the relocation center for your child's school, sign in and stay there.*
- 2. You may pick up your child at the relocation center and go and stay at the relocation center for your zone.*
- 3. You may pick up your child at the relocation center and go and stay somewhere other than the relocation center, as long as you are 10 miles from the plant.*

Your child will be cared for at the relocation center by school and county officials until you arrive.
