

Energy Efficiency for Business HVAC Tuneup

An annual HVAC tuneup helps your building operate more efficiently. You'll save energy every month, and every year.

HVAC systems that receive annual maintenance service perform more efficiently (and last longer). That's because over time, inefficiencies can naturally occur that affect your system's performance. When equipment is poorly maintained it wears out faster, which costs more in repairs or replacement in the long run. You can help reduce monthly energy costs simply by correcting inefficiencies with an annual HVAC tuneup.

Earn incentives of **\$25 per ton** – plus save up to 20 percent on heating and cooling costs – when you service your HVAC to our standards.

Think it's time for an HVAC tuneup? Start with a free Business Energy Check. Performance is measured before and after the tuneup to ensure your system is operating at peak levels.

Want to get incentives? Here's how:

1. Call Duke Energy for a FREE Business Energy Check.
2. Ensure that all equipment tuneups and repairs meet manufacturers' instructions and specifications.
3. Submit all required documentation to your Energy Advisor within six months of project completion. The appropriate form must be completed and submitted with other required documentation to qualify for the incentive. Forms can be found at duke-energy.com/FLbusiness.
4. This incentive is available only once over the life of the HVAC unit.

Note

Incentive is capped at a maximum of 50 percent of the total project cost.

Other requirements may apply.

EEB Programs at a Glance

Duke Energy has a dedicated team of Energy Advisors ready to help businesses integrate energy-saving systems into both existing and new construction. A comprehensive list of our energy-saving programs is below. Please contact your Duke Energy Advisor to see if you qualify for these money- and energy-saving programs.

Preventive maintenance

- HVAC tuneup
- Rooftop HVAC recommissioning
- Chiller tuneup
- PTAC/PTHP coil cleaning

Roofing measures

- Ceiling insulation upgrade
- Duct check program
- Roof insulation
- Cool roof

Equipment installation

- High-efficiency chillers
- Small heat pumps (<65,000 Btu/h)
- High-efficiency energy recovery ventilation
- Unitary AC units and heat pumps (>65,000 Btu/h)
- Packaged terminal heat pumps and packaged terminal air conditioners
- Demand control ventilation
