

Energy Efficiency for Business Chiller Tuneup

Want to make your building more energy efficient? Request a tuneup for its chiller system.

All existing electric chiller systems can benefit from annual service calls. That's because over time, inefficiencies can naturally occur that affect your chiller's performance. Poorly maintained equipment wears out faster than equipment that's properly maintained, which runs up large repair or replacement bills. You can reduce monthly energy costs through proper maintenance and by simply correcting any inefficiencies.

Earn an incentive of **\$5 per ton** and save a significant amount on your cooling costs when you service your building's chiller to our standards.

Ready for a chiller tuneup? Start with a free Business Energy Check. Performance is measured before and after the tuneup to ensure your system is operating at peak levels.

Want to get incentives? Here's how:

1. Call Duke Energy for a FREE Business Energy Check.
2. Ensure that all equipment tuneups and repairs meet manufacturers' instructions and specifications.
3. Submit all required documentation to your Energy Advisor within six months of project completion. The appropriate form must be completed and submitted with other required documentation to qualify for the incentive. Forms can be found at duke-energy.com/FLbusiness.
4. This incentive is available only once over the life of the chiller.

Note

Incentive is capped at a maximum of 50 percent of the total project cost.

Other requirements may apply.

Contact your Duke Energy Advisor for further details.

EEB Programs at a Glance

Duke Energy has a dedicated team of Energy Advisors ready to help businesses integrate energy-saving systems into both existing and new construction. A comprehensive list of our energy-saving programs is below. Please contact your Duke Energy Advisor to see if you qualify for these money- and energy-saving programs.

Preventive maintenance

- HVAC tuneup
- Rooftop HVAC recommissioning
- Chiller tuneup
- PTAC/PTHP coil cleaning

Roofing measures

- Ceiling insulation upgrade
- Duct check program
- Roof insulation
- Cool roof

Equipment installation

- High-efficiency chillers
- Small heat pumps (<65,000 Btu/h)
- High-efficiency energy recovery ventilation
- Unitary AC units and heat pumps (>65,000 Btu/h)
- Packaged terminal heat pumps and packaged terminal air conditioners
- Demand control ventilation
