

Energy Efficiency for Business

Packaged Terminal Air Conditioner/ Heat Pump (PTAC/PTHP) Coil Cleaning

Get harmful bioaerosols – like mold spores and fungus – out of your PTAC system for cleaner air.

Cleaning a PTAC system doesn't have to involve harsh chemicals or inefficient pressure washing. The process of steam cleaning requires only water, limits exposure to bioaerosols and harmful germs, and keeps your PTAC system running more efficiently for years.

Cleaning your PTAC/PTHP coils can save you up to 20 percent on heating and cooling costs. Plus you can qualify for a **\$20 incentive per unit cleaned**.

**All other HVAC systems can qualify for a \$20 incentive per ton.*

The coil cleaning process is especially suited for hotel and similar business owners; it ensures your PTAC system uses less energy every day, and also protects the environment. The effects last two to three years and can even be repeated every year for the best bioaerosol control.

Incentive and savings example:

A hotel with 100 rooms can save up to \$1,667/year and qualify for a one-time incentive of \$2,000.*

**Savings based on 10 cents per kilowatt-hour.*

Want to get incentives? Here's how:

1. Call Duke Energy for a FREE Business Energy Check.
2. Ensure the cleaning process to be used is preapproved by a Duke Energy inspector.
3. Inform us of the cleaning date to allow for random inspections.
4. Provide copies of invoices and an inventory of equipment that was cleaned.
5. Submit all required documentation to your Energy Advisor within six months of project completion.
6. PTACs, PTHPs and other qualifying units are eligible for a one-time coil cleaning incentive over their lifetime.

Note

Incentive is capped at a maximum of 50 percent of the total project cost.

Other requirements may apply.

EEB Programs at a Glance

Duke Energy has a dedicated team of Energy Advisors ready to help businesses integrate energy-saving systems into both existing and new construction. A comprehensive list of our energy-saving programs is below. Please contact your Duke Energy Advisor to see if you qualify for these money- and energy-saving programs.

Preventive maintenance

- HVAC tuneup
- Rooftop HVAC recommissioning
- Chiller tuneup
- PTAC/PTHP coil cleaning

Roofing measures

- Ceiling insulation upgrade
- Duct check program
- Roof insulation
- Cool roof

Equipment installation

- High-efficiency chillers
- Small heat pumps (<65,000 Btu/h)
- High-efficiency energy recovery ventilation
- Unitary AC units and heat pumps (>65,000 Btu/h)
- Packaged terminal heat pumps and packaged terminal air conditioners
- Demand control ventilation
