

You protect your computers and electronics from power surges.

---

# BUT WHAT ABOUT YOUR APPLIANCES?

**Surge Protection**

## Protecting your major appliances

A power strip can help protect your computer or TV from damaging surges – but it won't protect your oven, refrigerator or HVAC system.

To protect those major appliances, you need surge protection at the place where the largest, most damaging surges could enter your home: your meter.

### Progress Energy's meter-base Surge Protection

*We'll install the meter-base protector and perform any necessary electrical grounding repairs at no extra charge.*

Our Surge Protection Service starts at your meter to block most surges before they reach your home's interior wiring. This means better protection for all your expensive appliances.

What's more, if our device fails as a result of a surge, you will be reimbursed for the cost to repair or replace your damaged appliance at fair market value.

Call **1.888.999.8856** today or visit [progress-energy.com/surge](http://progress-energy.com/surge).

# Appliances starts at your meter.

## Our meter-base Surge Protection protects major appliances

Consider the average replacement cost of your appliances if they were damaged by a power surge.\*

AC Compressor

**\$1,500 – \$1,700**

Refrigerator

**\$440 – \$2,000**

Pool Pump

**\$550 – \$1,500**

Washing Machine

**\$250 – \$2,000**

## Protect your appliances – and budget – today

Installation of the meter-base protector is quick – usually only about 15 minutes. And no appointment is generally necessary.

The cost is just \$5.95/month plus a one-time installation fee of \$44.95.\*\*

\* Estimated costs for replacing an air conditioner compressor and pool pump at [pillartopost.com](http://pillartopost.com). Estimated costs for refrigerator and clothes washer based on averages from The Home Depot® and Lowe's® Home Improvement.

\*\* Costs do not include applicable sales tax.

## **A second line of defense for sensitive electronics**

The meter-base protector is designed to reduce surges to a level that's safe for most appliances. However, sensitive electronics need a second stage of protection to block smaller surges, as well as surges from other lines such as your home's phone, cable or data lines.

Progress Energy offers plug-in protector strips for your electronics for an additional fee. These plug-in devices are up to six times stronger than most found in stores. We encourage you to provide this important second level of defense for computers, printers, TVs and other electronics.
